

WORKERS' COMPENSATION PROGRAM

For your employees' work-related Orthopaedic care

OSS Health has highly qualified and specialized physicians who demonstrate a depth of experience in treating a wide variety of work-related orthopaedic injuries. Our physicians exhibit excellent clinical results, medical utilization, and return-to-work outcomes. From sprains, strains and fractures to joint care, spine care, and pain management, we have you covered. Trust OSS Health to get your employees back to work.

Claims Management

Diverse team of Workers' Compensation Specialists

Timely communication is an important part of any effective team. Our Workers' Comp Specialists work as liaisons to answer questions and to keep the claim moving smoothly. They monitor your claims and assist you in resolving any concerns, ensuring your employees' safe and efficient return to work.

Work Conditioning Program – WorkLink

We understand that the injured worker's rehabilitation process is unique. WorkLink is a program designed to return the injured employee back to work safely by providing task specific conditioning with an established return-to-work goal.

Independent Medical Examinations (IME)

Independent Medical Examinations determine the cause, extent and medical treatment of a work-related injury where liability is the question. This helps to determine whether an individual has reached maximum benefit from treatment and whether any permanent impairment remains after treatment. Select OSS Health physicians perform these examinations based on their specialty.
